

# GROUP 3

## Strategic Objective 3

### **Enhancing Benefits**

Enhance benefits from socio-ecological production landscapes and seascapes (SEPLS) including by supporting factors and actions that increase the sustainable delivery of ecosystem services for human well-being.

# 1. Activities implemented for each Priority Action

## a) Support IPLCs for their resource management, social cohesion and local economies

- FAIRWILD certification to ensure proper ABS for medicinal plants (India)
- Biochar reforestation project united village communities to come together (Nepal)
- Reforestation using agroforestry approaches (Uganda)
- Transboundary approach to monitor rangeland, cultivation of the forage for restoration of degraded rangeland to support yak breeding (Hindu Kush and Himalayan region)
- Charcoal brick making and charcoal stoves for energy saving (Uganda)
- Community based forestry as an alternative livelihood (Uganda)

# 1. Activities implemented for each Priority Action

## b) Build on existing work with the Indicators of Resilience in SEPLS

-(no members have used the indicators)

-Implementation of ABS in Pacific Island Countries

# 1. Activities implemented for each Priority Action

## c) Explore opportunities for certification and branding

- Marketing communities' products to help them value the products and thus maintain production (Uganda)
- Certification of biochar carbon (Nepal)
- FAIRWILD certification (India)
- Certification of Shea butter (Ghana)

# 1. Activities implemented for each Priority Action

## d) Further promote analysis of multiple benefits

- Analysis and creation of value chains (Uganda)
- Physical redesign of rice production to more complex system to make more resilient, prevent pest outbreaks, increase yield (Indonesia)
- FAIRWILD certification (India)
- Certification of Shea butter (Ghana)
- Cinnamon essential oil production with biochar production (Nepal)
- Charcoal brick making and charcoal stoves for energy saving (Uganda)

# 1. Activities implemented for each Priority Action

## e) Promote adaptive management

- Awareness-raising and training of the local community in the benefits of certification (Ghana)
- Transboundary approach to yak herding with livelihood diversification (HKH region)
- Adaptive forestry management through reforestation (Nepal)
- Adaptive management of rice paddies (Indonesia)
- Wild product analysis (fruits) (Uganda)

# 1. Activities implemented for each Priority Action

## f) Promote benefits by using a holistic approach

- Integrate Climate Change with Disaster Risk Reduction and Ecosystem approach, engage all levels of decision making (Pacific Islands)
- Biochar for community benefits, carbon sequestration, biodiversity, improved soil (Nepal)
- Addressing integrated approaches to Invasive Species control (Pacific Islands)

## **2. Possible activities to further promote Priority Actions**

- Make use of REDD+ funding

## **3. Suggestions on the Plan of Action**

- Further emphasize climate change
- Link conservation with livelihood benefits
