Annex 2: Report of conclusion of IPSI Collaborative Activity

The following form is for use in reporting the conclusion of an IPSI Collaborative Activity. Please fill out this form when the Collaborative Activity is finished and submit to the IPSI Secretariat (isi@unu.edu).

Please provide a description of the activities and its outputs and/or outcomes below:

The initial proposed project was titled: “Development of Integrated Water Resource Strategy and monitoring of wetlands and river catchments of Laikipia County, Kenya.” Various outputs were expected out of this collaboration including:

- Laikipia Water Conservation Strategy for the Ewaso Ng’iro North;
- A monitoring guide for Ecosystem Health of Streams and Wetlands of Laikipia; and
- Documentary on Water Governance and the role of WRUAs in the Ewaso Ng’iro North.

However, the project ended with only one output: The Strategy

The Laikipia Water Conservation Strategy was developed in line with the objectives of the Water Program of the Laikipia Wildlife Forum. The strategy was coordinated and written by the Kenya Wetlands Biodiversity Research Group (KENWEB), and Laikipia wildlife Forum (LWF) water program. It involved consultations with 26 Water Resource Users Associations, the Water Resource Management Authority in Kenya and the Laikipia County Government.

**Stages of the Water Conservation Strategy development**

PDF AVAILABLE ON THE KENWEB WEBSITE: www.kenweb.or.ke

- **Initiation Stakeholders meeting** held on the 23rd to 24th May 2013 at Nanyuki Sportsman Arms where the Chairpersons of 25 WRUAs attended in order to provide inputs on elements which the strategy should address including its vision, mission and key issues including water allocation, water governance and environmental sustainability.

- **Field visits** to 26 WRUAs for further consultative discussions to follow up on the main themes discussed at the Stakeholders meetings. Discussions focused on challenges and strengths of the WRUAs in Water allocation particularly in regards to their capacity to ensure enforcement of regulations, compliance by members and governance of the group. The WRUAs also discussed priority areas that partnerships would be required to support efficiency in water allocation and governance.

- **Consultations with WRMA**: The purpose of this step was first to discuss with WRMA the findings
from the field visits in order to find out what support WRUAs have received so far in order to overcome challenges in enforcement, compliance and governance. Secondly, the team was able to discuss the sub-catchment plans developed for the various WRUAs and gather information on characteristics of the sub-catchments and the water resources in use and managed by the WRUAs; challenges, causes and remedies in water allocation and governance.

- **Consultations with the Laikipia County Government** took place between August and December 2013 whereby LWF Water Program Officer held discussions with county Governor and Deputy Governor regarding water policies, the role of county in development of the water sector and contributed to the refining of the draft Water and Sanitation Services Bill, 2013 through stakeholder consultative meetings.

- **Stakeholder Validation:** The draft strategy was circulated to stakeholders (including WRUAs, County representatives, WRMA, conservation and government agencies and others) in January 2014 for comments. At a stakeholder’s validation workshop held on 13th and 14th February 2014, the strategy was presented to all stakeholders to allow further input and validation of contents.

**Structure of the Water Conservation Strategy**

**CHAPTER 1 – INTRODUCTION**

**CHAPTER 2 – BACKGROUND**

**CHAPTER 3 – STRATEGY DEVELOPMENT PROCESS**

**CHAPTER 4 – CHARACTERIZATION OF SUB-CATCHMENTS AND WRUAs:** This section summarizes key features and water resources of the sub-catchments and the WRUAs within them. The main source of this information is the sub-catchment plans. The section also highlights some challenges faced by WRUAs in water allocation, and provides remedies suggested during the development or formalization of the WRUAs or during the development of the sub-catchment plans.

**CHAPTER 5 – COMPLIANCE, ENFORCEMENT AND GOVERNANCE:** This section presents a recent characterization of the present status of challenges in water allocation based on findings from field visits with WRUAs and other stakeholders. It underscores challenges in enforcement of by-laws, compliance by members and governance of the WRUA.

**CHAPTER 6 – VISION, MISSION, STRATEGIC OBJECTIVES AND ACTION:** This section outlines the overall strategic objectives of the Water Conservation Strategy including specific objectives within three strategic areas: Water use and allocation; environmental sustainability and water management and governance. The actions to be taken in order to address these objectives are also outlined for each strategic area.

**CHAPTER 7 – REPORTING, MONITORING AND EVALUATION:** This section deals with formats for reporting, monitoring and evaluation of the implementation of the Strategy. The indicators for monitoring and evaluation of progress in implementation and effectiveness of actions are
based on the priority areas to be addressed between 2014 and 2018. These will provide for review of the strategy and for lessons learnt for replication or improvement.

 Remarks:
Second phase of project did not continue. The partnership with Laikipia Wildlife Forum was no longer viable due to a change in directorship and different project focus.
