

IPSI Case Study Summary Sheet

Please submit this form along with your SDM project evaluation. We ask that you keep your responses here as concise as possible. This information along with your SDM project evaluation will be posted on the IPSI website unless otherwise requested. With this in mind, please provide accurate information in the fields below in a manner that will help readers understand your project. Please inform the SDM Secretariat if there are any responses you would not like made public.

Basic Information

Keywords (3-5 key concepts included in the case study)
Vulnerability, Adaptation, Sustainable Coffee, Market Access
Web link (of the case study or lead organization if available for more information)
http://www.worldagroforestry.org/country/Indonesia
https://www.adelaide.edu.au/global-food/news/list/2019/08/02/fieldwork-stories-from-south-sumatra

Geographical Information

Longitude/latitude or Google Maps link (if location is identified)									
Google Maps									
Latitude: -4.041962, Longitude: 103.227885.									
Ecosystem(s) (please place an "x" in all appropriate boxes)									
Forest	x	Grassland		Agricultural	x	In-land water		Coastal	
Dryland		Mountain	x	Urban/peri-urban		Other (Please specify)			
Socioeconomic and environmental characteristics of the area (within 50 words)									
Pagar Alam upland region is located in the upstream of Musi, one of the largest watersheds in Sumatra. A coffee producer area; 70% of its population are farmers and 30% of its area is the upland forest. Coffee farming is gradually being replaced by intensive farming practices, which would increase farmers' vulnerability to climate change and environmental risks.									
Description of human-nature interactions in the area (land-use, traditional resource management practices etc. – within 50 words)									
In Pagar Alam upland region, many farmers cultivate in the forest margin and sloping land. Pagar Alam, one of the major coffee production area in Sumatra, experiences rapid land-use conversion as many farmers convert their coffee agroforestry into seasonal crops, which might lead to further degradation of the upland environmental quality.									

Contents

Note: The following fields are used for information about activities described in the case study or the production of the case study itself, and contents may vary depending on the nature of the case study. For example, a case study about on-the-ground activities may include the rationale, objectives etc. for the activities; a case study about a SEPLS-related policy may describe the policymaking process; or a case study describing a SEPLS may address particular practices used there. Please make an effort to fill as many fields as possible.
Rationale (why activities or policies described, or information shared in the case study are needed – within 50 words)
In the upland of Pagar Alam, farmers cultivate in the forest margin area. The dominant coffee-farming practices, however, is being threatened by the intensive vegetable crops in the sloping upland. Coffee farmers still practice traditional management, and there is a need to incentivize coffee management improvement through sustainable farming practices.
Objectives (goals of activities or policies described, or of producing the case study – within 50 words)
The project has two overarching goals: <ol style="list-style-type: none"> To assess coffee smallholders' vulnerability that affects the upland livelihood and landscapes, based on local perspectives.

2. To enable smallholders to apply adaptation measures that simultaneously address livelihood and landscape improvement.
Activities and/or practices employed (<i>within 50 words</i>)
Vulnerability Assessment, Capacity building for Smallholders through Sustainable Coffee Workshop, and Linking farmers to better market
Results (<i>within 50 words</i>)
The project has improved the knowledge and understanding regarding the local vulnerability of upland farmers in Pagar Alam. The project has strengthened the local farmers' capacity on sustainable coffee farming practices. The project also facilitated the smallholders to access better market that incentivize improved management practices and landscape conservation efforts.
Lessons learned (<i>factors in success or failure, challenges and opportunities – within 40 words</i>)
This initiative demonstrated a boundary work that link sciences with the local actions, in order to improve the landscape and livelihood. The vulnerability assessment would provide a holistic description regarding the drivers of problem and formulate recommendation towards appropriate actions.
Key messages (<i>within 40 words</i>)
Adaptation to vulnerability requires a holistic approach that takes into account local livelihood and the landscape integrity. There is an opportunity to link the market with initiatives to maintain the landscape quality while improving the local livelihood. Multi-scale efforts involving various stakeholders are required for improving farmers' resilience.
Relationship to other IPSI activities (<i>if the case study is related to any other IPSI collaborative activities, case studies, etc.</i>)
N/A
Funding (<i>any relevant information about funding of activities or projects described in the case study</i>)
The activities under this grant were supported with the co-funding from ICRAF through IndoGreen project with the University of Adelaide, Australia, and funding from NedCoffee through Empower project

Contributions to Global Agendas

CBD Aichi Biodiversity Targets (<https://www.cbd.int/sp/targets/>)

Please place an "X" in the "direct" or "indirect" boxes next to any of the CBD's Aichi Biodiversity Targets to which the work described in this case study contributes as appropriate. Note: please mark only those that the case actually has made or is making a contribution, not those to which it could make a potential contribution in the future.

Target	Description	Direct	Indirect
	By 2020, at the latest, people are aware of the values of biodiversity and the steps they can take to conserve and use it sustainably.		x
	By 2020, at the latest, biodiversity values have been integrated into national and local development and poverty reduction strategies and planning processes and are being incorporated into national accounting, as appropriate, and reporting systems.		x
	By 2020, at the latest, incentives, including subsidies, harmful to biodiversity are eliminated, phased out or reformed in order to minimize or avoid negative impacts, and positive incentives for the conservation and sustainable use of biodiversity are developed and applied, consistent and in harmony with the Convention and other relevant international obligations, taking into account national socio economic conditions.	Not Relevant	Not Relevant

	By 2020, at the latest, Governments, business and stakeholders at all levels have taken steps to achieve or have implemented plans for sustainable production and consumption and have kept the impacts of use of natural resources well within safe ecological limits.		x
	By 2020, the rate of loss of all natural habitats, including forests, is at least halved and where feasible brought close to zero, and degradation and fragmentation is significantly reduced.	x	
	By 2020 all fish and invertebrate stocks and aquatic plants are managed and harvested sustainably, legally and applying ecosystem based approaches, so that overfishing is avoided, recovery plans and measures are in place for all depleted species, fisheries have no significant adverse impacts on threatened species and vulnerable ecosystems and the impacts of fisheries on stocks, species and ecosystems are within safe ecological limits.	Not Relevant	Not Relevant
	By 2020 areas under agriculture, aquaculture and forestry are managed sustainably, ensuring conservation of biodiversity.	x	
	By 2020, pollution, including from excess nutrients, has been brought to levels that are not detrimental to ecosystem function and biodiversity.	Not Relevant	Not Relevant
	By 2020, invasive alien species and pathways are identified and prioritized, priority species are controlled or eradicated, and measures are in place to manage pathways to prevent their introduction and establishment.	Not Relevant	Not Relevant
	By 2015, the multiple anthropogenic pressures on coral reefs, and other vulnerable ecosystems impacted by climate change or ocean acidification are minimized, so as to maintain their integrity and functioning.	Not Relevant	Not Relevant
	By 2020, at least 17 per cent of terrestrial and inland water, and 10 per cent of coastal and marine areas, especially areas of particular importance for biodiversity and ecosystem services, are conserved through effectively and equitably managed, ecologically representative and well connected systems of protected areas and other effective area-based conservation measures, and integrated into the wider landscapes and seascapes.	Not Relevant	Not Relevant
	By 2020 the extinction of known threatened species has been prevented and their conservation status, particularly of those most in decline, has been improved and sustained.	Not Relevant	Not Relevant
	By 2020, the genetic diversity of cultivated plants and farmed and domesticated animals and of wild relatives, including other socio-economically as well as culturally valuable species, is maintained, and strategies have been developed and implemented for minimizing genetic erosion and safeguarding their genetic diversity.	Not Relevant	Not Relevant
	By 2020, ecosystems that provide essential services, including services related to water, and contribute to health, livelihoods and well-being, are restored and safeguarded, taking into account the needs of women, indigenous and local communities, and the poor and vulnerable.	x	
	By 2020, ecosystem resilience and the contribution of biodiversity to carbon stocks has been enhanced, through conservation and restoration, including restoration of at least 15 per cent of degraded ecosystems, thereby contributing to climate change mitigation and adaptation and to combating desertification.		x

	<p>By 2015, the Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization is in force and operational, consistent with national legislation.</p>	<p>Not Relevant</p>	<p>Not Relevant</p>
	<p>By 2015 each Party has developed, adopted as a policy instrument, and has commenced implementing an effective, participatory and updated national biodiversity strategy and action plan.</p>	<p>Not Relevant</p>	<p>Not Relevant</p>
	<p>By 2020, the traditional knowledge, innovations and practices of indigenous and local communities relevant for the conservation and sustainable use of biodiversity, and their customary use of biological resources, are respected, subject to national legislation and relevant international obligations, and fully integrated and reflected in the implementation of the Convention with the full and effective participation of indigenous and local communities, at all relevant levels.</p>	<p>Not Relevant</p>	<p>Not Relevant</p>
	<p>By 2020, knowledge, the science base and technologies relating to biodiversity, its values, functioning, status and trends, and the consequences of its loss, are improved, widely shared and transferred, and applied.</p>	<p>Not Relevant</p>	<p>Not Relevant</p>
	<p>By 2020, at the latest, the mobilization of financial resources for effectively implementing the Strategic Plan for Biodiversity 2011-2020 from all sources, and in accordance with the consolidated and agreed process in the Strategy for Resource Mobilization, should increase substantially from the current levels. This target will be subject to changes contingent to resource needs assessments to be developed and reported by Parties.</p>	<p>Not Relevant</p>	<p>Not Relevant</p>

UN Sustainable Development Goals (SDGs) (<https://sustainabledevelopment.un.org/sdgs>)

Please place an "x" in the "direct" or "indirect" boxes next to any of the UN Sustainable Development Goals to which the work described in this case study contributes as appropriate. Note: please mark only those that the case actually has made or is making a contribution, not those to which it could make a potential contribution in the future.

SDG	Description	Direct	Indirect
	End poverty in all its forms everywhere		x
	End hunger, achieve food security and improved nutrition, and promote sustainable agriculture	x	
	Ensure healthy lives and promote wellbeing for all at all ages		x
	Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all		x
	Achieve gender equality and empower all women and girls		x
	Ensure availability and sustainable management of water and sanitation for all		x
	Ensure access to affordable, reliable, sustainable and modern energy for all	Not Relevant	Not Relevant
	Promote sustained, inclusive and sustainable economic growth, full and productive employment, and decent work for all		x
	Build resilient infrastructure, promote inclusive and sustainable industrialisation, and foster innovation	Not Relevant	Not Relevant
	Reduce inequality within and among countries	Not Relevant	Not Relevant
	Make cities and human settlements inclusive, safe, resilient and sustainable	Not Relevant	Not Relevant
	Ensure sustainable consumption and production patterns	x	
	Take urgent action to combat climate change and its impacts	x	

	<p>Conserve and sustainably use the oceans, seas and marine resources for sustainable development</p>	<p>Not Relevant</p>	<p>Not Relevant</p>
	<p>Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification and halt and reverse land degradation, and halt biodiversity loss</p>	<p>x</p>	
	<p>Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels</p>	<p>Not Relevant</p>	<p>Not Relevant</p>
	<p>Strengthen the means of implementation and revitalise the global partnership for sustainable development</p>		<p>x</p>
