

IPSI Case Study Summary Sheet

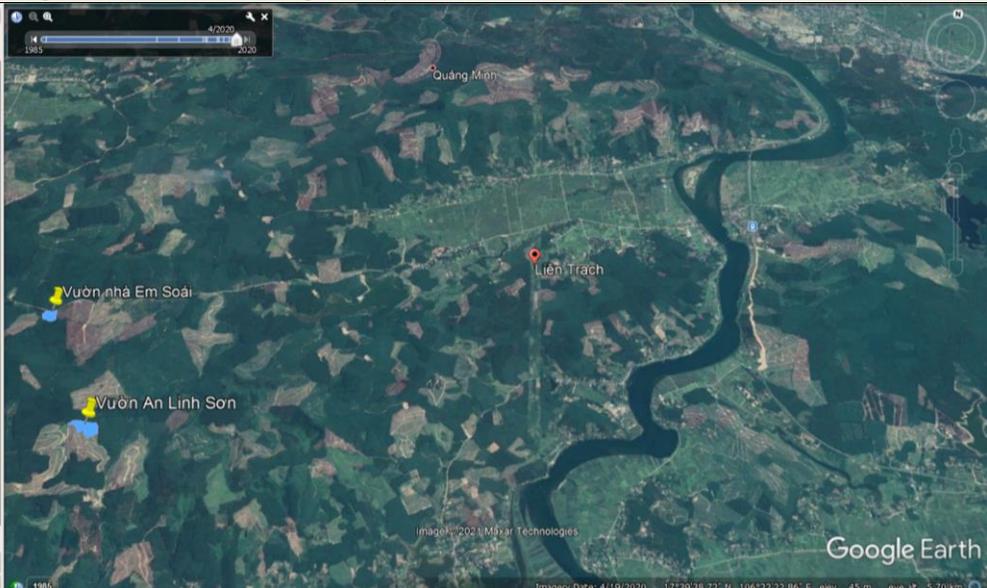

Please submit this form along with your SDM project evaluation. We ask that you keep your responses here as concise as possible. This information along with your SDM project evaluation will be posted on the IPSI website unless otherwise requested. With this in mind, please provide accurate information in the fields below in a manner that will help readers understand your project. Please inform the SDM Secretariat if there are any responses you would not like made public.

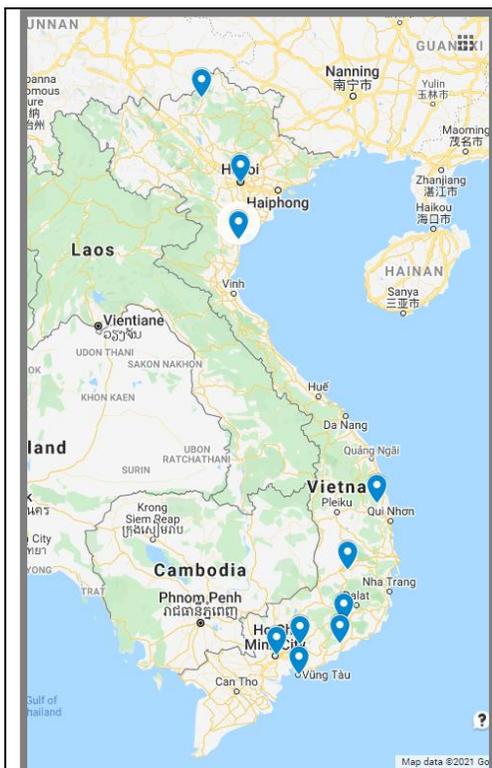

Any information from this, we are very happy to make public by SDM program.

Basic Information

Keywords (3-5 key concepts included in the case study)
Mixed species planting, local indigenous varieties, grassroots mobilization, restoration strategy, policy support.
Web link (of the case study or lead organization if available for more information)
We do not yet publish any things from this case study.

Geographical Information

Longitude/latitude or Google Maps link (if location is identified)
 <p>Map 1 of Lien Trach commune and indication of 02 out of 03 best farms. The other farm we were not yet able to map.</p>

Map 2 indicates the extend of other beneficiaries and those whom are currently developing mixed species restoration farms after learning at workshop.

Ecosystem(s) (please place an "x" in all appropriate boxes)

Forest	X	Grassland		Agricultural	x	In-land water		Coastal	
Dryland		Mountain	x	Urban/peri-urban		Other (Please specify)			

Socioeconomic and environmental characteristics of the area (within 50 words)

The site is located in Lien Trach commune, Bo Trach district, Quang Binh province with a total of land area 2,781 hectares, mainly farmers. In recent years, mono-plantation increased to up to 70%-85% of the total area, focusing on Acacia, Pine and Eucalyptus. Natural forests remained very small. Road access and other facilities/infrastructure have been extremely difficult.

Description of human-nature interactions in the area

(land-use, traditional resource management practices etc. – within 50 words)

Mono-culture and plantations have been dominant in the project area contributing to the income of local communities. However, the vulnerability of mono-plantations has been revealed by strong typhoons in 2013 and 2017 and one in December 2018 which destroyed large area of mono-plantations, as well as that Acacia and Eucalyptus plantations have caused huge water shortage.

Contents

Note: The following fields are used for information about activities described in the case study or the production of the case study itself, and contents may vary depending on the nature of the case study. For example, a case study about on-the-ground activities may include the rationale, objectives etc. for the activities; a case study about a SEPLS-related policy may describe the policymaking process; or a case study describing a SEPLS may address particular practices used there. Please make an effort to fill as many fields as possible.

Rationale (why activities or policies described, or information shared in the case study are needed – within 50 words)

The lack of sustainable direction for long-term livelihoods security such as the integrated-farming models in the rural communities has caused mono-plantation landscapes, lowering the quality of ecosystem services and exclusion of certain people. Hence, a pilot project with evidence-based farming models targeting young generation is highly beneficial for the rural communities.

Objectives (goals of activities or policies described, or of producing the case study – within 50 words)

This project aims to provide the proper knowledge, raise public awareness and advocate policies needed to achieve the long-term livelihood security through the restoration of the integrated-farming combined with

diverse tree species and animal husbandry. The project especially targets a group of young farmers who are expected to play a role as change agents.
Activities and/or practices employed (<i>within 50 words</i>)
1. A series of community workshops on mixed species restoration; 2. Supporting the sourcing of local tree varieties and animals' varieties for model farms; and 3. Documenting the lessons learned from the projects to share with others who are interested and help out local policy.
Results (<i>within 50 words</i>)
Five community workshops were organized for 109 participants in total. Three model farms were established. The documentation of lessons from this project was made on a website which also provides a hub to connect farmers from/outside the projects. Overall, awareness on restoration of local indigenous species has been cultivated across the regions.
Lessons learned (<i>factors in success or failure, challenges and opportunities – within 40 words</i>)
Since farming involves a number of unexpected issues (e.g. African Swine Fever) or failures, it is necessary to embrace lessons learned from them, be willing to listen to farmers' personal experiences and encourage them to overcome the hardships with close engagement.
Key messages (<i>within 40 words</i>)
Although it is challenging to make concrete changes visible at the ground level and benefiting local communities, the willingness to share difficulties and experiences openly is very important to lead to success for farm-holders, for the youths, for a project implementer and for joint collaboration.
Relationship to other IPSI activities (<i>if the case study is related to any other IPSI collaborative activities, case studies, etc.</i>)
No collaborative activities due to COVID-19.
Funding (<i>any relevant information about funding of activities or projects described in the case study</i>)
<ul style="list-style-type: none"> - Many parts of farms' settings and running e.g. land areas, holes preparation, animals' facilities and so forth have all been self-funded by the farmers. This should credit to them due to their sincere and serious attitude in making this project work. - Hours of working from CENDI team and staff are all being part of co-financing (our working hours are for the farmers, not paid from the project).

Contributions to Global Agendas

CBD Aichi Biodiversity Targets (<https://www.cbd.int/sp/targets/>)

Please place an "x" in the "direct" or "indirect" boxes next to any of the CBD's Aichi Biodiversity Targets to which the work described in this case study contributes as appropriate. Note: please mark only those that the case actually has made or is making a contribution, not those to which it could make a potential contribution in the future.

Target	Description	Direct	Indirect
	By 2020, at the latest, people are aware of the values of biodiversity and the steps they can take to conserve and use it sustainably.	x	
	By 2020, at the latest, biodiversity values have been integrated into national and local development and poverty reduction strategies and planning processes and are being incorporated into national accounting, as appropriate, and reporting systems.		x (but very slowly)
	By 2020, at the latest, incentives, including subsidies, harmful to biodiversity are eliminated, phased out or reformed in order to minimize or avoid negative impacts, and positive incentives for the conservation and sustainable use of biodiversity are developed and applied, consistent and in harmony with the Convention and other relevant international obligations, taking into account national socio economic conditions.		
	By 2020, at the latest, Governments, business and stakeholders at all levels have taken steps to achieve or have implemented plans for sustainable production and consumption and have kept the impacts of use of natural resources well within safe ecological limits.		

	By 2020, the rate of loss of all natural habitats, including forests, is at least halved and where feasible brought close to zero, and degradation and fragmentation is significantly reduced.	x (but continues taking more times to mature)	
	By 2020 all fish and invertebrate stocks and aquatic plants are managed and harvested sustainably, legally and applying ecosystem based approaches, so that overfishing is avoided, recovery plans and measures are in place for all depleted species, fisheries have no significant adverse impacts on threatened species and vulnerable ecosystems and the impacts of fisheries on stocks, species and ecosystems are within safe ecological limits.		
	By 2020 areas under agriculture, aquaculture and forestry are managed sustainably, ensuring conservation of biodiversity.		
	By 2020, pollution, including from excess nutrients, has been brought to levels that are not detrimental to ecosystem function and biodiversity.		
	By 2020, invasive alien species and pathways are identified and prioritized, priority species are controlled or eradicated, and measures are in place to manage pathways to prevent their introduction and establishment.		
	By 2015, the multiple anthropogenic pressures on coral reefs, and other vulnerable ecosystems impacted by climate change or ocean acidification are minimized, so as to maintain their integrity and functioning.		
	By 2020, at least 17 per cent of terrestrial and inland water, and 10 per cent of coastal and marine areas, especially areas of particular importance for biodiversity and ecosystem services, are conserved through effectively and equitably managed, ecologically representative and well connected systems of protected areas and other effective area-based conservation measures, and integrated into the wider landscapes and seascapes.		
	By 2020 the extinction of known threatened species has been prevented and their conservation status, particularly of those most in decline, has been improved and sustained.		
	By 2020, the genetic diversity of cultivated plants and farmed and domesticated animals and of wild relatives, including other socio-economically as well as culturally valuable species, is maintained, and strategies have been developed and implemented for minimizing genetic erosion and safeguarding their genetic diversity.	x (but continues taking more times to mature)	
	By 2020, ecosystems that provide essential services, including services related to water, and contribute to health, livelihoods and well-being, are restored and safeguarded, taking into account the needs of women, indigenous and local communities, and the poor and vulnerable.		x
	By 2020, ecosystem resilience and the contribution of biodiversity to carbon stocks has been enhanced, through conservation and restoration, including restoration of at least 15 per cent of degraded ecosystems, thereby contributing to climate change mitigation and adaptation and to combating desertification.		
	By 2015, the Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization is in force and operational, consistent with national legislation.		

	<p>By 2015 each Party has developed, adopted as a policy instrument, and has commenced implementing an effective, participatory and updated national biodiversity strategy and action plan.</p>		<p>X (but continues taking more times to mature)</p>
	<p>By 2020, the traditional knowledge, innovations and practices of indigenous and local communities relevant for the conservation and sustainable use of biodiversity, and their customary use of biological resources, are respected, subject to national legislation and relevant international obligations, and fully integrated and reflected in the implementation of the Convention with the full and effective participation of indigenous and local communities, at all relevant levels.</p>		<p>x (but continues taking more times to mature)</p>
	<p>By 2020, knowledge, the science base and technologies relating to biodiversity, its values, functioning, status and trends, and the consequences of its loss, are improved, widely shared and transferred, and applied.</p>		<p>x (but continues taking more times to mature)</p>
	<p>By 2020, at the latest, the mobilization of financial resources for effectively implementing the Strategic Plan for Biodiversity 2011-2020 from all sources, and in accordance with the consolidated and agreed process in the Strategy for Resource Mobilization, should increase substantially from the current levels. This target will be subject to changes contingent to resource needs assessments to be developed and reported by Parties.</p>		

UN Sustainable Development Goals (SDGs) (<https://sustainabledevelopment.un.org/sdgs>)

Please place an “x” in the “direct” or “indirect” boxes next to any of the UN Sustainable Development Goals to which the work described in this case study contributes as appropriate. Note: please mark only those that the case actually has made or is making a contribution, not those to which it could make a potential contribution in the future.

SDG	Description	Direct	Indirect
 1 NO POVERTY	End poverty in all its forms everywhere	x	
 2 ZERO HUNGER	End hunger, achieve food security and improved nutrition, and promote sustainable agriculture	x	
 3 GOOD HEALTH AND WELL-BEING	Ensure healthy lives and promote wellbeing for all at all ages	x	
 4 QUALITY EDUCATION	Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all		
 5 GENDER EQUALITY	Achieve gender equality and empower all women and girls		
 6 CLEAN WATER AND SANITATION	Ensure availability and sustainable management of water and sanitation for all		
 7 AFFORDABLE AND CLEAN ENERGY	Ensure access to affordable, reliable, sustainable and modern energy for all		
 8 DECENT WORK AND ECONOMIC GROWTH	Promote sustained, inclusive and sustainable economic growth, full and productive employment, and decent work for all	x	
 9 INDUSTRY, INNOVATION AND INFRASTRUCTURE	Build resilient infrastructure, promote inclusive and sustainable industrialization, and foster innovation		
 10 REDUCED INEQUALITIES	Reduce inequality within and among countries		
 11 SUSTAINABLE CITIES AND COMMUNITIES	Make cities and human settlements inclusive, safe, resilient and sustainable		
 12 RESPONSIBLE CONSUMPTION AND PRODUCTION	Ensure sustainable consumption and production patterns		
 13 CLIMATE ACTION	Take urgent action to combat climate change and its impacts		x

	<p>Conserve and sustainably use the oceans, seas and marine resources for sustainable development</p>		
	<p>Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification and halt and reverse land degradation, and halt biodiversity loss</p>		x
	<p>Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels</p>		
	<p>Strengthen the means of implementation and revitalize the global partnership for sustainable development</p>	x
